#### **Speed vs. Accuracy Analysis**

The following charts illustrate the relationship between response speed and accuracy Each chart shows the overall ADHD patient population trend (grey dots and red line) and highlights this patient's performance (blue dot). This helps visualize the individual's speed-accuracy tradeoff strategy compared to others. Non clinical means are in blue (Norm)

#### **Interpreting Speed-Accuracy Trends:**

The population trend lines (red) illustrate how speed (reaction time) typically relates to accuracy (errors) for each test within the dataset.

- Shifting Attention Test (SAT): Shows a positive correlation, indicating a classic speed-accuracy tradeoff where faster responses tend to be associated with more errors.
- Stroop Test & Reasoning: These tests display a negative correlation. Slower reaction times are generally associated with fewer errors. This suggests that individuals who take more time tend to perform more accurately on these specific tasks within this population sample.

### **Cognitive Domain Explanations**

The cognitive assessment measures performance across multiple domains. Each domain score is derived from specific test components as described below:

Cognitive Domain	Calculation Method
Executive Function	SAT Correct Responses - SAT Errors
Complex Attention	Stroop Correct Responses - Stroop Commission Errors
Simple Attention	CPT Correct Responses - CPT Commission Errors
Sustained Attention	Sum(4PCPT P2-P4 Correct) - Sum(4PCPT P2-P4 Incorrect)
Processing Speed	SDC Correct Responses - SDC Errors
Reaction Time	Stroop RT + CPT RT + SAT RT (weighted average)
Psychomotor Speed	FTT Right Taps Average + FTT Left Taps Average + SDC Correct
Motor Speed	FTT Right Taps Average + FTT Left Taps Average
Visual Memory	BVMT-R Total Recall + BVMT-R Delayed Recall
Verbal Memory	VBM Total Recall + VBM Delayed Recall
Working Memory	4PCPT Part 4 Correct - Part 4 Incorrect
Reasoning	NVRT Correct Responses - NVRT Commission Errors
Cognitive Flexibility	SAT Correct Responses - SAT Errors + Stroop Interference Score

Note: Percentiles compare an individual's score to a normative group. A percentile of 50 represents average performance. Scores marked (INVALID) indicate the source test failed validity checks.
